

It's about time.

PIONEER

Catheter

Pioneer catheter reduces the time it takes to cross chronic total occlusions (CTOs) from several hours or longer to just a few minutes.*

But Pioneer catheter is about more than just saving time. It's about saving limbs—and improving clinical results. That's why Pioneer catheter is the first-choice tool for crossing CTOs.

Faster crossing. Accurate diagnostics. Precise reentry. Predictable deployment. Exceptional outcomes.

It's time to bypass the alternatives for a faster, more effective method.

*Data on file at Medtronic, Inc.

Indications

The Pioneer catheter is intended for the placement and positioning of catheters within the peripheral vasculature. The Pioneer catheter also provides an intraluminal cross-sectional ultrasound image of the area of interest.

WARNING: The Pioneer catheter is not indicated for use in the coronary or cerebral vasculature.

CAUTION: Federal (USA) law restricts sale of this device to sale by or on the order of a physician.
